EXPERIENCE

SMARTCAST

Internship - started in July 2024

Smartcast is company that provides a service for business owners and many more people to control their monitors and tvs' content online by using special program which our team developers built; My main role on this company is to learn about how we could make our program run on the Samsung TVs too, so I found out the ways to use Tizen studio Application and build the of the project by myself, but of course at the same time more skilled professionals around me are helping me to review my code and correct my mistakes as I am in the internship at this company now
